

About

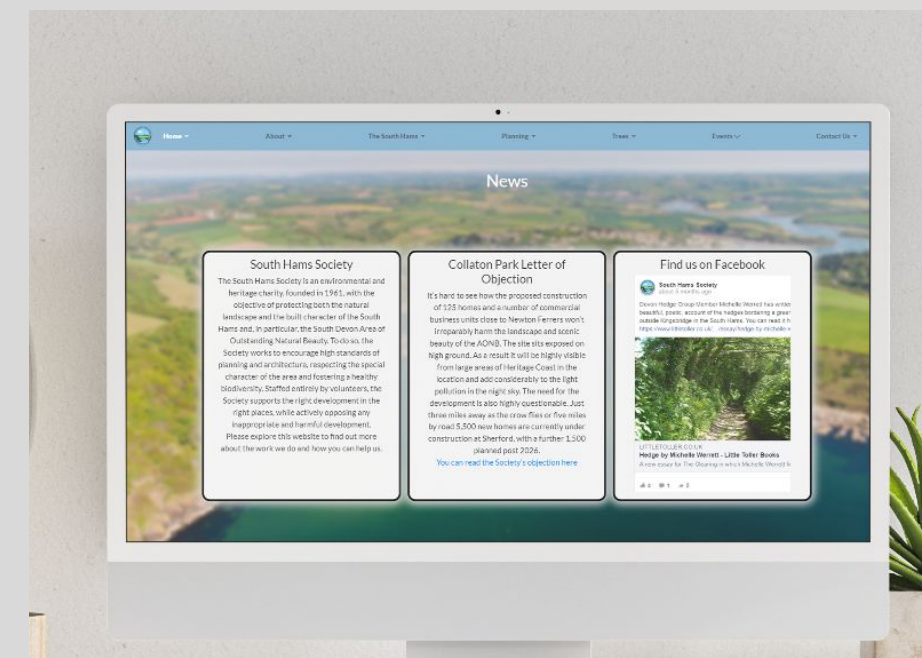

A website designed for the South Hams Society in which members can see what the Society is currently doing and their future plans to preserve the natural landscape of the South Hams.

The South Hams Society is an environmental/heritage charity. We work to protect and enhance the natural and built landscape of the South Hams, and particularly that of the South Devon Area of Outstanding Natural Beauty.

Why is it needed?

The South Hams Society needed a rejuvenated website to promote their activities. The site aims to inform the local communities what the local councils are doing, this is a place where everyone's word matter.

This could be a potential rebrand to encourage new members to join and speak freely about what they believe.

Technology Used

Textpattern: An open-source content management system (CMS) for PHP and MySQL.

Bootstrap: An open-source CSS framework directed at responsive, mobile-first front-end web development.

Visual Studio - Integrated development environment.

MySQL: Open-source relational database management system.

Languages: HTML/CSS, JS, PHP, C#, SQL

Project's best features

Responsive display: This website is responsive due to the usage of bootstrap, this makes it optimised for users on all devices.

User-friendly: The website went through several variations to bring the website's engagement levels up, this includes; color-blind friendly colour scheme, large text and other features.

Membership form: The society's membership form has moved to online which makes it more convenient for more people to fill in rather than posting it through the mail which increases waiting times.
